Basic Auto Config

Smart Home Delivery Document

Delivered to: Dennis

Location: Europe

Project reference: Demo project ref.

Delivery date: 29-01-2026

Introduction

Welcome to your smart home documentation. We're delighted to present the completed automation system for your residence. This document marks the successful integration of intelligent technology throughout your property, transforming everyday living into an effortless experience. Your home automation system now encompasses 11 rooms with 26 smart functions, carefully designed to enhance comfort, convenience, and control. The installation covers seven key areas: Lighting, Climate, Shading, Security, Wellness, Access, and Energy management. Each system has been configured to work seamlessly together, creating an intuitive environment that responds to your needs. This document serves as your practical guide and reference manual. You'll find detailed information about each automated function, instructions for daily operation, and helpful tips to make the most of your new smart home. We recommend keeping it accessible for quick consultation whenever needed.

System Overview

Your smart home installation encompasses 11 rooms throughout the property, bringing together seven integrated categories that work in harmony. The system focuses on lighting control across 9 rooms, climate management in 8 areas, and automated shading solutions for 6 spaces. Additional features include wellness functionality, access control, and energy monitoring to create a comprehensive living environment. The climate system deserves special attention. It provides full heating control and passive cooling capabilities, allowing you to maintain comfort year-round without excessive energy consumption. Temperature adjustments happen automatically based on your preferences and daily routines, while the shading system works alongside climate control to prevent unwanted solar heat gain during warmer months. Lighting automation extends through most of your home, offering scenes for different moments of the day. Morning routines, evening relaxation, or entertaining guests – each scenario has its own lighting atmosphere ready at a single touch. The system learns your patterns and can suggest adjustments that suit your lifestyle. Everything connects through one central control interface. You can monitor energy usage, adjust temperatures, close shades, or dim lights from anywhere in the house. The wellness and access features add extra layers of comfort and convenience. This isn't about technology for its own sake. It's about simplifying daily life, reducing energy waste, and giving you effortless control over your environment.

Security

This project includes a central security system that protects your entire home.

You can arm and disarm zones separately. For example, when sleeping, only the downstairs zones are armed, so you can move freely upstairs.

The system uses existing motion sensors. No extra hardware needed. During an alarm, you receive an immediate notification on your smartphone with information about which sensor was triggered.

Arm the alarm via the app, Touch panels, or NFC tags. Choose instant arming (when nobody is inside) or with delay (30-60 seconds to leave calmly).

During an alarm, you're immediately warned. You receive a notification on your smartphone and can check the situation via the app.

24/7 peace of mind through proactive monitoring and quick warnings. The system adapts to your daily rhythm while you always maintain full control.

Climate

8 rooms

The climate system controls the temperature in 8 ruimtes across multiple floors: Bathroom, Bedroom, Garage, Kitchen, Landing, Living Room, Nursery, WC.

Each room has two temperature settings: a Comfort temperature for when you're present (e.g., 21°C), and an Eco temperature for when the room is empty (e.g., 18°C). This saves energy without sacrificing comfort.

Via the app, you set per room when the Comfort temperature should be active. For example, weekdays from 07:00-09:00 and 18:00-23:00, with an adjusted schedule on weekends. Outside these times, the system automatically switches to Eco.

The system detects presence and automatically switches to Comfort temperature when you enter a room, even outside scheduled times. So you always have comfort when you need it.

The system starts preheating so the room is ready exactly on time. No more cold mornings.

This smart approach ensures optimal living comfort while saving energy. No one needs to heat empty rooms unnecessarily, and everyone enjoys the perfect temperature in their own space.

This system is active in the following rooms:

- Bathroom
- Bedroom
- Garage
- Kitchen
- Landing
- Living Room
- Nursery
- WC

Access

1 room

The access control system manages 1 toegangspunt in your home.

Via the Intercom, you see and hear who's ringing, wherever you are. Answer calls via your smartphone and open the door remotely. Perfect for delivery drivers or expected guests.

With every doorbell or door opening, you receive a notification on your smartphone. So you always know who's coming and going, even when you're not home.

The system works together with lighting and security. When arriving home, lights turn on automatically, and when leaving, the alarm activates itself.

Never miss a package or unexpected visitor. Full control over who enters your home, with the peace of mind that you're always informed.

This system is active in the following room:

- Outside

Lighting

9 rooms

The lighting system gives you full control over 9 ruimtes in your home. Via the app or Touch panels, you can easily set the mood in every room.

In 9 ruimtes, you have dimming functionality allowing you to precisely adjust light intensity from 0 to 100%. These are: Bathroom, Bedroom, Garage, Kitchen, Landing, Living Room, Nursery, Storage Cellar, en 1 andere ruimte. This lets you effortlessly create the desired atmosphere, from dimmed light for a relaxing evening to full brightness during work.

In 7 ruimtes, you can also choose colors from 16 million options: Bedroom, Kitchen, Landing, Living Room, Nursery, Storage Cellar, WC. Perfect for mood lighting during special occasions or to create the right ambiance.

Via the app, you create light scenes like "Dinner" where all relevant lights automatically dim to 70%, or "Goodnight" which turns off the entire house with one press. Time-based automation is also possible: lights turn on automatically with motion, or dim after 10 PM for a quiet evening.

This system not only provides more comfort and ambiance but also saves energy by ensuring you never leave lights on unnecessarily. Forgot to turn off the lights? One glance at your app shows exactly which lights are still on.

This system is active in the following rooms:

- Bathroom
- Bedroom
- Garage
- Kitchen
- Landing
- Living Room
- Nursery
- Storage Cellar
- WC

Shading

6 rooms

The shading system protects 6 ruimtes against bright sun and overheating: Bathroom, Bedroom, Kitchen, Living Room, Nursery, WC.

The blinds close automatically in bright sun to prevent overheating and protect your furniture from UV radiation. The angle of the blinds adjusts to the sun's position for optimal protection.

Het systeem werkt intensief samen met de klimaatregeling. Wordt een ruimte te warm, dan sluiten de lamellen automatisch voor passieve koeling. Dit bespaart aanzienlijk energie omdat minder actieve koeling nodig is. De zonwering en klimaatregeling communiceren continu om het optimale binnenklimaat te handhaven.

During storms, outdoor shading automatically goes up to prevent damage. You don't need to worry when you're not home.

Of course, you can also control manually via the app or Touch panels. Set preferred positions like "fully open", "half for privacy", or "closed for sleeping".

Automatic shading increases comfort, protects your interior, and lowers energy costs through smart cooperation with heating and cooling.

This system is active in the following rooms:

- Bathroom
- Kitchen
- Nursery
- Bedroom
- Living Room
- WC

Contact

Thank you for your trust in our smart home system. We hope you will enjoy your new installation for many years to come. If you have any questions about the operation of the system, please do not hesitate to contact us. Your satisfaction is our priority.
